Logique et prospective de l'Hybridation: Son potentiel pour la transition énergétique Joseph Beretta Président Automobile technologies & Mobilité Expertise 2015

Un hybride à la demande adapté à un Usage

AT&ME

Hybride Rechargeable

- Autonomie de 25 à 70 km en mode ZEV
- Recharge sur le réseau en 1 heure
- Les hybrides série sont majoritairement rechargeable
- Potentiel de réduction de CO2 important si usage ZEV majoritaire

37

Prius rechargeable: Full hybride rechargeable

AT&ME

Moteur Puissance : 73 kW Batteries : Lithium Ion

Info Batterie : Temps de charge : 1 heure 30 -Récupération d'énergie par freinage Autonomie : 23 (en tout électrique) km

Vitesse maximum: 180 km/h

Accélération : De 0 à 100 km/h en 11,3

39

hybride rechargeable :Range extender

19

Hydrogène après 2020/2030 ?

AT&ME

➤ Réservoir sous pression: 200 à 700 bars 85 à 100kg

> Densité d'énergie(réservoir inclus): 2 à 5 kWh/kg et kWh/l

➤ autonomie (60I): 300 à 500 km

➤ Temps pour un plein(60l):
5 – 10 mn

➤ Nouvelles Contraintes : sécurité, infrastructure!

Conclusions

AT&ME

- Le moteur thermique sera toujours présent,
- Il devra partager avec l'électricité.
- l'Hybride est une solution durable
- -Orientation:
 - Pour le coût = le micro et le Mild
 - Pour les performances = le full en série/parallèle
- -Explorer les autres voies que l'électrique:
 - Hydraulique
 - Mécanique

Choisir sa motorisation en fonction de son usage majoritaire
